

1. Computer Science: "AI-Powered Sign Language Translator for the Deaf Community"

Project: Develop an AI app that converts real-time sign language into text/speech (and vice versa) to break communication barriers for deaf individuals in workplaces and schools.

Community Impact: Promotes inclusivity, reduces employment discrimination, and empowers the deaf community to engage fully in society.

Execution:

- Train a machine learning model on regional sign language datasets.
- Collaborate with deaf organizations for feedback.
- Launch a free mobile/web app with offline functionality.
